

redADMS

Alcohol and Drug Management System

Quickly and simply manage all of
your alcohol and drug clients.

- Easy to record and maintain client records
- Directly record treatment and outcomes
- Manage appointments
- Produce real time client and practice activity reports
- Track and report on client outcomes
- Meets National Minimum Data Set reporting requirements

Australia's Premier Alcohol and Drug Client Management System

HISTORY

Redbourne Alcohol and Drug Management System (redADMS) has been recently adapted from the successful Queensland Health alcohol and drug management system utilised in over 30 sites around Queensland. This system is now available to independently operating drug and alcohol treatment service providers.

CLIENT MANAGEMENT

Redbourne Alcohol and Drug Management System allows you to quickly record and maintain records. It features easy to navigate screens that guide you through data collection, with simple point and click functions.

Information collection features include:

- Client name and contact details
- Emergency contacts / next of kin
- Provides alerts to clients needs (eg allergies, special health requirements)
- Tracks client address history.

redADMS allows you to directly record treatment details including

- Type of treatment program
- Client substance use history
- Types of treatment provided
- Risk assessment

You can easily capture and review your client progress notes and capture psychometric screening and outcome measures with easy to read graphical reports. Screening tools include:

- Alcohol use (AUDIT)
- Depression, Anxiety, and Stress Score (DASS21)

CASELOAD AND ACTIVITY MANAGEMENT

Redbourne Alcohol and Drug Management System helps manage staff case load and provides extensive real time and cumulative reporting on activity at a client and practice level. Standard reports provided include:

- Real time case load management
- Active client lists

REPORTING ON DEMAND

The system provides a large variety of easy to operate and easy to interpret reports that allow your organisation to understand client and resource needs, client trends and treatment effectiveness.

APPOINTMENT SCHEDULING

The system manages your availability, client appointment scheduling and records client attendance.

NATIONAL DATA COLLECTION AND REPORTING

The system collects national standard data items (National Minimum Data Set) and produces easy to submit formatted files to meet national minimum data set reporting requirements

SUPPORT TOOLS

As part of the **redADMS** package, Redbourne provides you with administrative and data collection tools including complementary standard forms and technical guides.

CUSTOMISABLE

Redbourne is happy to examine your individual practice needs and customise the **Redbourne Alcohol and Drug Management System** to support your business requirements.

ABOUT THE COMPANY:

Redbourne is a business processing company that helps clients and stakeholders maximise the effectiveness of their drug and alcohol programs. Amongst other key projects, the Company has administered the Queensland Illicit Drug Diversion Initiative (QIDDI) on behalf of Queensland Health since the program's introduction in 2001. In this time, Redbourne has coordinated assessment and education sessions for over 55,000 clients diverted from police, court and youth justice services. The Company has developed a web portal application to track, collect and report client and treatment data.

Redbourne offers expertise in providing end to end assistance and technical expertise to health service providers, particularly in the field of drug and alcohol services. Redbourne offers advice and management of the purchase of computing hardware and seamlessly project manages the installation, migration of existing data, staff training and technical support.

Redbourne also offers other complementary business support services including design and management of optically scanned forms for automatic data entry, data backup and storage, and administrative outsourcing support.

CORE STRENGTHS

- Supply of alcohol and drug client management system to capture client and treatment data
- Electronic health form processing
- Electronic health document management systems
- Quality control processes
- Business process mapping and analysis
- Applied business rules and documented procedures
